AGRICULTURE AND ENVIRONMENTAL SCIENCES

Master's Degree

The MSc Course gives to the graduates depth and specialized knowledge and skills relating to **both crops** and livestock production. These are aimed at the design and management of innovations in **qualitative** and **quantitative** agricultural production, through a systemic approach, by combining knowledge and biological needs with farms and landscape resources, technical means and environmental sustainability.

The common basic teachings address the topics of research methodology in agriculture, innovations and management of agricultural and livestock systems, sustainable strategies in crops protection, obtaining quality plant products, agricultural policies, management of agricultural enterprises and investment analysis, agricultural mechanization, rural landscape planning and job safety in agriculture in **their innovative aspects**.

The Master's Degree in Agricultural and Environmental Sciences is structured in two curricula:

- **Agricultural Sciences** (ScAg), in this program the courses focus on the general aspects of the production process of agri-food by herbaceous, three and vegetable crops, and livestock; all the courses of the whole programme are held in Italian.
- **Organic Agriculture** in Mediterranean Area (OrgAgriMed), in this program the courses focus on the aspects of sustainability, resilience and climate change in Mediterranean environments in food production processes; all the courses of the whole programme are held in English. This Master's Course will start in September 2025.
