## Artificial Intelligence, Inclusion and Sustainability in Higher Education

The 7<sup>th</sup> International Staff Week at the University of Tuscia is a dynamic opportunity for academic and administrative staff from partner universities worldwide to exchange ideas and best practices on international mobility and innovation in higher education.

The programme focuses on the impact of artificial intelligence on inclusion, accessibility, and sustainability, while also addressing key ethical and societal challenges. Through thematic sessions, workshops, and roundtables, participants explore new approaches to teaching, learning, and international cooperation.

Special attention is given to strengthening Erasmus mobility, expanding partnerships, and developing joint and double degree programmes. Networking activities foster collaboration and the sharing of practical strategies to enhance the quality and impact of internationalisation.
